WinBidPro

The All New WinbidPro v16 from GDS Estimating has been a long and laborious journey for our whole team. The goal was to create a commercial glass estimating program with the latest software tools, that would retain the simplicity and ease-of-use that our popular v15 program is known for. In addition, we wanted to create a product that could grow with the industry by adding powerful tools and features as the need arises.

WinBidPro v16 is a modern evolution of the estimating software created by GDS Estimating. Here are just a few of the key features that v16 offers:

- Modern interface and user experience with tools and tips that users expect from the latest, greatest software
- Web hosted catalog and job information, allowing for shared data among multiple users and shop locations
- Frame and part configurations that are more powerful, intuitive, and detailed. Improving on the ultimate flexibility that WinBidPro provides for complex jobs.
- Robust drawing features that provide more intuitive and quicker ways to draw elevations

GDS Estimating offers a Free 30-day trial for anyone who would like to see what WinBidPro can do for them.

Visit our website at gdsestimating.com, for more information, pricing, training, and downloads for the software.
