

American systems

Casement System

The windows in this system open outwards. They are operated by means of a hand crank fixed at the bottom of the frame. This type of window is distinguished from other window systems destined for the US market by the best thermal insulation.

- Integrated flipper suitable for the new-construction type of windows
- It is possible to manufacture a frame designed for the replacement-type of windows
- Installation depth 82.55 mm (3¹/₄")
- Opening and closing takes place using the side lever and the hand crank
- It is possible to manufacture an Awning-type hinged window
- Glazing of the sashes on the outside
- Glazing range up to 20 mm
- Integrated accessory slots
- Optimum triple sealing
